

UNIVERSAL BLEND™

Creeping Bentgrass

Dark Green Color

Heat Tolerance

Disease Tolerance

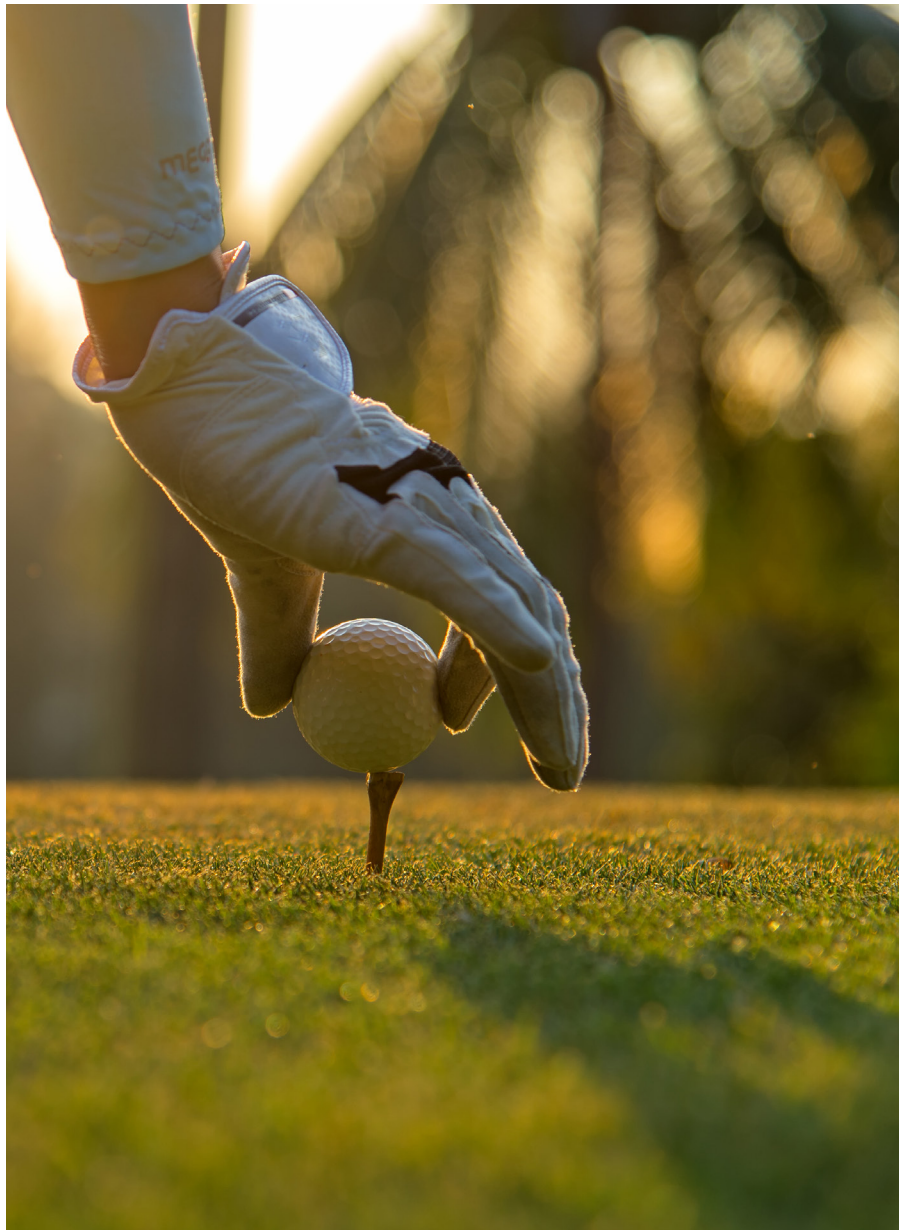

Universal Blend is a combination of high performance Jacklin creeping bentgrasses at an affordable price.

As common with Jacklin bentgrasses, this blend will exhibit aggressive lateral growth and less top growth, allowing it to spread without growing tall. From increased heat and drought tolerance, to more resistance against diseases, this blend can be planted in a wide range of golf courses and applications. Jacklin bentgrasses represent decades of research, combining germplasm collections from historic golf course putting greens throughout the United States. The breeding lines represented in Universal Blend were screened using Jacklin's "spot plot" *Poa annua* putting green for aggressiveness against *Poa*, ensuring competitive growth habits leading to fewer chances of infestation.

Key features

- Good performance under reduced irrigation
- Dark genetic color for a pronounced contrast
- Resistant to many bentgrass diseases
- Excellent for greens, fairways, or tees

**VERY
FLEXIBLE
PERFORMANCE**

Technical Information

Applications

Our Universal Blend is suited for greens, tees, and fairways where affordability and performance are both priorities. It thrives across the cool, temperate regions of the world, and it is adapted well into the transition zone between warm and cool-season areas.

Maintenance

Seeding Rate: 1-2lbs./M*
Interseeding 2 bs./M*
*M=1,000 square feet
