

Mecoprop-P

Control tough weeds in grasses and cereals

Key benefits:

- Controls tough annual and perennial broadleaf weeds in **grasses** (turf, golf greens and fairways) and **cereal crops** (oats, wheat, barley, rye grasses, bent grasses, blue grasses and red fescue).
- Tank mix flexibility with fertilizers and other pesticides including MCPA Amine and 2,4-D.

Weeds controlled:

- Common chickweed
- Mouse-eared chickweed
- Clover
- Plantain
- Black medic
- Buttercup
- Creeping Charlie
- Dandelion (with 2,4-D)
- Corn spurry
- Canada thistle (top growth only)
- Lamb's quarters
- Cleavers
- Wild mustard
- Stitchwort

Formulation type and packaging:

- Group 4
- 150 g ae/L Mecoprop-P, present as potassium salt
- Easy-to-use liquid formulation
- 10 L jug

Application details:

- Application rate: 2.2 to 3.4 L/ac.
- For best results, apply to actively growing weeds at the 2 to 4 leaf stage. Treat wheat, oats and barley from the time the crop is in the 3-leaf expanded stage to the early flag leaf (shot blade) stage. Safe to apply on seedling and established grasses. Do not apply to grain under-seeded to legumes.
- Avoid applying in very hot weather or drought conditions.
- Rainfall within 4 to 6 hours may reduce effectiveness. Do not water grasses for 24 hours after application, and do not cut grass for 3 to 4 days before or after application.
